

Colour Range for Hytrel® Cover

Habia Teknofluor manufacture a wide range of high-performance hoses with Hytrel® cover in different colours. The following datasheet shows which standard colours we use for our range of Hytrel®. Variations may occur depending on dimensions or production volumes. The Hytrel® cover is often used in order to protect and separate different hoses or as a symbol for what media is transported. Habia recommend a service temperature between -50 °C and 110 °C.
