

Marked Fluoroplastic Tubing

Habia Teknofluor manufactures a wide range of fluoroplastic tubing in different colours and with various fillers. All products can be offered with marking according to customer demands. The marking may be plain text, number, date, time, logotype, bar code, ID Matrix Code etc.

Dimension and choice of raw material affect the marking quality. With PTFE the marking is non-transparent white and on PFA, FEP and ETFE the marking will be transparent.

The dimension of the tube is limiting the size of the marking. Marking the tube size OD>5mm gives an excellent result and clear reading for most applications. The marking etches the tube, but its mechanical properties are only marginally affected. The technical data specified in our product sheets is also valid for marked tube.
